

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

a larger attempt to educate in thrift. A chapter on the "Relation of Art to School Activities" contains material for both upper and lower grades.

The theme of the studies is set forth in a paragraph from the Preface. "In speaking of the needs of the modern world, Dr. Dewey says that a democratic society 'must have a type of education which gives individuals a personal interest in social relationships and control, and the habits of mind which secure social changes without introducing disorder.' The object of this volume is to suggest that the aims here defined can be best realized by having a schedule flexible enough to meet special and individual needs, and a curriculum adapted to the demands of each child's mind and spirit."

These *Studies in Education*, formerly called yearbooks, are published annually by the faculty of the Francis W. Parker School. This type of co-operative curriculum study is very desirable, and it would be helpful if similar work could be reported from many schools.

*Stanford-Binet test material.*—The use of the Stanford revision of the Binet-Simon test has been subject to two difficulties which are now removed. The first of these was the necessity of memorizing the standard form for giving all of the tests, since these were scattered through the larger book, *The Measurement of Intelligence*, and could not readily be referred to during the process of testing. The difficulty of memorizing all of the directions has certainly produced some variations in giving the tests, which, in turn, have modified the results to some degree. These directions are now formulated conveniently in a condensed form<sup>1</sup> similar to that used by the army for the Alpha tests. The use of this manual should make the procedure of giving the tests more uniform and accurate. An important comment by the author should be noted. "It is impossible, however, to warn the inexperienced examiner too emphatically against the dangers inherent in the routine application of mental tests without some knowledge of their derivation, meaning, and purpose. The necessary psychological background for the use of the Binet scale I have tried to supply in *The Measurement of Intelligence*, and in *The Intelligence of School Children* I have explained the practical uses of mental tests in the grading and classification of school children. It is only as a supplement to these books that the procedure of the Stanford Revision is here presented in abbreviated form" (p. 5).

A second difficulty encountered in testing large numbers of school children was the expense of the record booklet. A modified form of this has been provided on a single sheet, which may be used by trained examiners at considerably less expense.

---

*Group intelligence tests.*—The number of group tests for mental ability is increasing very rapidly. The point has now been reached where the publication of additional tests needs to be justified by some new or unique characteristic,
